Staff Retention Ideas
Employee Retention Tips for Leaders

• Employee turnover is costly and time-consuming
• It creates stress for existing employees and scheduling havoc
• Keeping good employees should be a leadership priority
• Start with a self-assessment, looking at your leadership skills and how you present yourself
• Staff who are nurtured and developed are more likely to provide the highest quality care for your residents
• We are providing tips to consider for retaining your staff
Teamwork

- Have fun and use humor in the workplace
- Embrace diversity
- Get to know each employee as an individual
- Develop teamwork at every level of the organization
- Model interdepartmental relations – internal customer service and respect
- Resolve conflicts quickly
Employee Satisfaction

- Offer salaries that are competitive with your local market
- Provide incentives, for example, performance-based salary increases and/or small financial rewards/bonuses for milestones such as tenure, positive attendance, overall performance or “catching them doing something excellent” above and beyond their usual duties
- Celebrate organizational success
Career Advancement and Employee Development

- Enrich their positions with knowledge and responsibility to help them feel valued
- Provide educational opportunities
- Provide opportunities for them to teach others
- Promote from within when possible
- Use a career ladder to offer promotional opportunities, such as a “lead CNA” or “mentor” role when employees have proven to be successful and reliable
Open Communication

• Create an open-door policy to encourage employees to talk to you
• Make rounds on all shifts, interacting with staff and residents
• Identify and acknowledge stressors in the workplace and help with solutions
• Help employees to learn to problem-solve
• Offer solutions to assist with work-life balance
Employee Involvement

• Educate existing staff continually, including policy and process changes
• Involve staff in continuous improvement (QAPI) and in resident-care discussions when possible
• Focus on the process for improvement when failures or near misses occur and support the involved employees (remember to focus on process, not individuals, as people generally do not come to work intending harm)
• Make sure staff know what is expected of them and have a role in the decision-making process
• Include employees in setting goals and celebrate when achieved
• Improve retention by hiring the right people and make sure they are a good fit for the organization; consider group and resident interviews
• Provide adequate orientation and mentors for new hires; consider post-orientation discussions
Scenario-Based Risk Assessment
What is a Risk Assessment?

Identify health or safety hazards
Analyze and evaluate risks
Determine ways to minimize or eliminate risks

The results of the facility assessment must be used to establish and update the IPCP, its policies and/or protocols to include a system for preventing, identifying, reporting, investigating and controlling infections and communicable diseases for residents, staff and visitors.
Examples of Risk Assessments

- Infection Control Assessment and Response (ICAR)
- Annual IPC program evaluation (483.70(e) (F838)
- Scenario-based
| Resident name: | Unvaccinated resident is going to Bingo 2x/week (indoor, >5 people, greater than 1 hour duration) and there may be potential exposure to COVID-19.
Community alert level: Low
Resident vaccination rate: 95%
Staff vaccination rate: 96% |

**Risk Assessment Summary**
Resident is unvaccinated. Resident is wearing a mask while out of facility. Potentially unvaccinated individuals at Bingo. Able to socially distance.
Risk level: Low

**Action Plan**
Monitor resident for symptoms. Consider testing (PCR or POC) weekly. If symptoms, place resident in quarantine and test for COVID-19.
Mask use and social distance while in facility when around other residents.
